The Department of Mechanical Engineering, PSCMRCET has conducted A Three week certificate course on "HTML" for which the resource person is Dr.D.Durga Prasad, Professor, Department of CSE, PSCMRCET for II year MECH students from 24 -11-2021 to 15-12-2021.

HTML stands for HyperText Markup Language. It is used to design web pages using a markup language. HTML is the combination of Hypertext and Markup language. Hypertext defines the link between web pages. A markup language is used to define the text document within the tag which defines the structure of web pages. This language is used to annotate (make notes for the computer) text so that a machine can understand it and manipulate text accordingly. Most markup languages (e.g. HTML) are human-readable. The language uses tags to define what manipulation has to be done on the text. HTML is a markup language used by the browser to manipulate text, images, and other content, in order to display it in the required format.

Around 58 students from II year attended the training program which will be very useful once they enter into any industry. A few faculty members from Mechanical Engineering department also attended this training program along with the students.

Outcomes:

1. Insert a graphic within a web page.
2. Create a link within a web page.
3. Create a table within a web page.
4. Insert heading levels within a web page.
5. Insert ordered and unordered lists within a web page.
6. Use cascading style sheets.
7. Create a web page.

Department of CSE organized a certificate program on "**Hands on Machine Learning Techniques with Python**" for **III CSE** Students by the resource person Mrs. P.S.Silpa from **18-**28-02-2022 to 05-03-2022

Main focus of the workshop was to do hands on practical with Data Science (Google CoLab) tool. The field of Data Science is maturing rapidly and demands professionals skilled not only in Statistics, but also in advanced concepts such as Natural Language Processing and Neural Networks. Artificial intelligence and Machine learning (AI & ML) methods leverage the superior computational capabilities of machines that can process large amounts of data, and find patterns and associations through sophisticated algorithms. Many business functions are forced to make decisions, without access to the necessary facts and intelligence, from their own data set to achieve alignment with business objectives. Further, in this digital age, massive amounts of data are being produced by information systems, user devices and IoT devices.

DEPARTMENT OF CIVIL ENGINEERING

REPORT

Name of the course: Certificate course on **ETABS** software

Duration: 21-03-2022 to 08-04-2022

Resource Person: Dr. J. Jaya Krishna

Head of the Department,

CIET, Lam, GUNTUR District.

Mail Id :jjayakrishna@gmail.com

The Department of Civil Engineering, PSCMRCET has conducted a certificate course on ETABS software from 21 MARCH 2022 to 08th April 2022 for the third ,fourth year Students. "ETABS-Extended 3D analysis of Building Systems", is a 3D modeling software for any kind of structure analysis and design. Using this software, one can create any kind of Complex structure easily. 3D model is created with the utilizations of plan views and elevation. 3D modeling, visualization, and automatic code-based learning are some of the unique feature of this software.

This software is loaded with an integrated system consisting of modeling tools and templates, Code- based load prescriptions, analysis methods, and solutions techniques. The software can handle the largest and most complex building model and associated Configurations. ETABS software is embedded with CAD- like drawing tools with an object- based interface and grid representation. ETABS also supports several analytical models like response spectrum analysis, time –history analysis, and line direct integration time-history analysis.

Around 100 students from III , IV year attended the certificate course which will be very useful once they enter into the construction industry.

Outcomes:

1. Will get fundamental knowledge of how to build a model.
2. Analysis and design mat foundations and slabs with any shape.
3. Can create 3D design of structures like bridges, dams, tanks and building structures.
4. Can generate detailed and comprehensive reports for every project or task.

Department of CSE organized a certificate program on **"Fundamentals of Machine Learning & its Applications"** for **IV CSE** Students by the resource person Mr. Arunjith Chowdhury from 04.04.2022 to 09.04.2022

Main focus of the workshop was to do hands on practical with Data Science (Google CoLab) tool. The field of Data Science is maturing rapidly and demands professionals skilled not only in Statistics, but also in advanced concepts such as Natural Language Processing and Neural Networks. Artificial intelligence and Machine learning (AI & ML) methods leverage the superior computational capabilities of machines that can process large amounts of data, and find patterns and associations through sophisticated algorithms. Many business functions are forced to make decisions, without access to the necessary facts and intelligence, from their own data set to achieve alignment with business objectives. Further, in this digital age, massive amounts of data are being produced by information systems, user devices and IoT devices.

Objectives:

1. Develop the ability to independently solve business problems using AI & ML.
2. Learn to use popular AI & ML technologies like Python, Tensorflow and Keras to develop applications
3. Develop expertise in popular AI & ML technologies and problem-solving methodologies

Learning outcomes:

1. Students are able to develop AI & ML Projects.

DEPARTMENT OF MECHANICAL ENGINEERING

Report on A Two week certificate course on "Python"

(02-03-2022 to 16-03-2022)

The Department of Mechanical Engineering, PSCMRCET has conducted A Three week certificate course on "Python" for which the resource person is Ms. Ch.B.V.Durga, Assistant Professor, Department of CSE, PSCMRCET for IV year MECH students from 02-03-2022 to 16-03-2022.

Python is highly versatile. You can use it for both small and complex tasks, and it is used across many different industries — from its more common applications in data science and software engineering to environments like mobile app development, artificial intelligence, and machine learning. This multifaceted use is due to the wide array of Python libraries available (over 125,000, to be specific). Libraries are collections of pre-written code in a particular language that anyone can access, meaning that once you've learned the basics of Python, you'll likely be able to understand and use a huge amount of code developed by other programmers. Another important aspect of Python's versatility is its ability to run with other programming languages. A few common examples of Python implementation with other languages are Jython (Python integrated with Java) and CPython (Python integrated with C). Lastly, Python offers cross-platform functionality, meaning that it will function properly whether you're working with Windows, Linux, or macOS.

Around 114 students from IV year attended the training program which will be very useful once they enter into any industry. A few faculty members from Mechanical Engineering department also attended this training program along with the students.

Outcomes:

1. Write simple Python programs.
2. Develop Python programs with conditionals and loops.
3. Define Python functions and to use Python data structure- lists, tuples, dictionaries.

Department of CSE organized a certificate program on "Certificate course on Iot Applications using arduino and raspberry pi" for II IOT & CS Students by the resource person Mr. VSRK PRASAD from 2nd MAY 2022 to 21st MAY 2022.

Main focus of the course was to do hands on practical with IOT technology of 21st century. IOT technology learning explores the area of connect and exchange data with other devices and systems over the internet or other communication networks. An IoT ecosystem consists of web-enabled smart devices that use embedded systems, such as processors, controllers, sensors and communication hardware, to collect, send and act on data they acquire from their environments. IoT can also make use of artificial intelligence (AI) and machine learning to aid in making data collecting processes easier and more dynamic. Now a day IoT is one of the most important technologies of everyday life, and it will continue to pick up steam as more businesses realize the potential of connected devices to keep them competitive.

Overall student learnt the basics of working with some technology of IoT, controllers, processors, sensors and communication devices in exchange of data and to make functionality based on data exchange between devices. With this 4.0 industry need platform students are willing to use this technology in their projects in future.

Objectives:

1. Understand the IoT technology and its need in livelihood.
2. Understand of using sensors, controllers & processors and communication of exchange data.
3. Implementation of technology of IoT and making some real time projects on it.

Learning outcomes:

1. Students get familiar with IoT Technology
2. Students are able to known the sensors, controllers and actuators functionality.
3. Students are get familiar with arduino and raspberry pi in IoT applications

DEPARTMENT OF MECHANICAL ENGINEERING

Report on A Three week certificate course on "3D Printing Technology"

(09-05-2022 to 28-05-2022)

The Department of Mechanical Engineering, PSCMRCET has conducted A Three week certificate course on "3D Printing Technology" for which the resource person is Kalai Selvan, VAC Instructor from R.K Microns for III year MECH students from 09-05-2022 to 28-05-2022.

3D printing is one of the most important technological advancement in additive manufacturing which has been implemented and recognized as a part of modern industry as it has many advantages over conventional approach of which one of the most important factor which is time. Generally in Fused Deposition Modeling the component is manufactured using the concept of rapid prototyping and layer by layer deposition of the material which is done by sending the data into the software of the machine using a stereolithography (.STL) file format made by using modeling software (CAD). In today's world of mechanical engineering the applications of 3D printing are very useful for research and development of various components ranging from simple structures used in everyday life to complicated components in aerospace applications. 3D printing provides many advantages few are simplicity, reliability and precision etc. 3D printing is the most widely used additive manufacturing processes in the current industry not only limited to engineering.

Around 50 students from III year attended the training program which will be very useful once they enter into any industry. A few faculty members from Mechanical Engineering department also attended this training program along with the students.

Outcomes:

1. basic technical understanding of the physical principles, materials, and operation of the types of AM processes
2. understand the relationships between AM process phenomena and part accuracy and surface finish.

Department of CSE organized a certificate Course on ""An Efficient ML Approach to handle Imbalanced data for Classification" for II CSE-AI&ML Students by the resource person Mr. B.Sarath Chandra from 09th May 2022 to 28th May 2022.

Main focus of the workshop was to do hands on practical with Machine learning tools.. Imbalance data is a case where the classification dataset class has a skewed proportion. There are three cases of Imbalance — Mild, Moderate, and extreme; depends on the minority class proportion to the whole dataset. SMOTE or **Synthetic Minority Oversampling Technique** is an oversampling technique but SMOTE working differently than your typical oversampling.In a classic oversampling technique, **the minority data is duplicated from the minority data population.** While it increases the number of data, it does not give any new information or variation to the machine learning model. SMOTE works by utilizing a **k-nearest neighbour** algorithm to create synthetic data. SMOTE first start by choosing random data from the minority class, then k-nearest neighbours from the data are set. Synthetic data would then be made between the random data and the randomly selected k-nearest neighbour.

Overall student learnt the basics of working with various machine learning framework. Feedback students was collected and it suggested that they welcomed this initiative and they are motivated

to explore more dimension in this platform also they are willing to use this tools in their projects in future.

Objectives:

1. Understand the components of a Machine Learning algorithm.
2. How Machine Learning uses computer algorithms to search for patterns in data
3. Understands basics of Deep Learning Algorithms

DEPARTMENT OF CIVIL ENGINEERING

Report on A Certificate Course on REVIT software

Duration:9-25 May 2022

Resource Person: Sd.Imran

Working: Nippon koei

Mail Id : sdimran@gmail.com

The Department of Civil Engineering, PSCMRCET has conducted a certificate course on REVIT software from 09 MAY 2022 to 25 MAY 2022 for the third , second year Students. Revit is a multidiscipline BIM platform, architects can share their revit models with structural engineers and construction professionals in real-time. This software allows users to create, edit, analysis, visualization, 3D model reinforcement detailing and automatic code-based learning are some of the unique feature of this software. 3D model is created with the utilizations of plan views and elevation. This feature will speed up the design process and make plans more vivid.

This software is loaded with an integrated system consisting of modeling tools and templates, Code- based load prescriptions, analysis methods, and solutions techniques 3D reinforcement designs, cloud based structural analysis, plan documents and steel fabrications. The software can handle the largest and most complex building model and associated Configurations. Around 70 students from III,II year attended the training program which will be very useful once they enter into the construction industry. A few faculty members from Civil Engineering department also attended this training program along with the students.

Outcomes:

1. Will get fundamental knowledge of how to build a model.
2. Analysis and design of slabs with 3D reinforcement detailing.
3. Can generate detailed and comprehensive reports for every project or task.

Department of CSE organized a certificate program on "Mobile Application Development" for III CSE Students by the resource person Mrs. Ch. B. V. Durga from 08-08-2022 to 27-08-2022.

Main focus of the workshop was to do hands on practical with Mobile Application Development (MIT App Inventor) tool. MIT App Inventor is an intuitive, visual programming environment that allows everyone – even children – to build fully functional apps for Android and iOS smartphones and tablets. Those new to MIT App Inventor can have a simple first app and running in less than 30 minutes. And what's more, blocks-based tool facilitates the creation of complex, high-impact apps in significantly less time than traditional programming environments. The MIT App Inventor project seeks to democratize software development by empowering all people, especially young people, to move from technology consumption to technology creation.

DEPARTMENT OF ELECTRONICS & COMMUNICATION ENGINEERING

Date: 27.8.2022

REPORT

Name of the Program: Certificate program on Antenna Design

Duration: 16.8.2022 to 26.8.2022

Resource Person Details: **M.Naveen Kumar,**

Assistant Professor, Department of ECE, PSCMR College of Engineering & Technology

Number of Students Attended: 69

Venue: Computer labs, PSCMRCET

A Two week certificate program was conducted by **M.Naveen Kumar**, Assistant Professor, Department of ECE, PSCMRCET on Antenna Design to enlighten the students in the emerging areas and importance of role of antennas in communication system.

OBJECTIVES

- Introduction to Antennas
- Hardware Aspects – Fabrication and Testing of RF Antennas
- Software Aspects – Design and Simulation of Microstrip Patch Antennas
- Applications of Microstrip Patch Antennas

TOPICS COVERED

- Antenna Parameters
- Types of Antennas
- Slotted Waveguide Antenna
- Bi quad Antenna
- Testing of the Antennas
- Feed Techniques
- Methods of Analysis
- Simulation Software – IE3D
- Design of a Simple Rectangular Patch Antenna
- Simulation of 1.9 GHz Patch Antenna
- Simulation of 5GHz Patch Antenna
- Simulation of Dual Band Patch Antennas
- Applications of Microstrip Patch Antennas
- Advantages and Disadvantages of Patch Antennas

OUTCOMES

- The overall working of antennas was understood.
- The major parameters (such as Return Loss curves, Radiation Patterns, Directivity and Beam width) that affect design and applications were studied and their implications understood.
- The constructed slotted waveguide and bi quad antennas operated at the desired frequency and power levels. Several patch antennas were simulated (using IE3D) and the desired level of optimization was obtained.
- It was concluded that the hardware and software results we obtained matched the theoretically predicted results.
