

Language lab

In this present day scenario, a technical student without English competence is like a fish out of water, losing his/her significance. The student of Engineering and Technology needs a specific set of language skills for success in education and career. With a view to developing students' competence in LSRW Skills in English, the English Proficiency lab was set up. This lab was designed to provide the students with a strong platform for practical training in the language. Here students are exposed to functional language in use and are familiarized with the many pronunciation styles that are vital in everyday usage of the English language in today's world. In the Lab the students are trained by efficient teachers with the help of soft wares like Rosetta stone, Learn to Speak English, Pronunciation Power etc., along with the CDs prescribed by JNTU Kakinada. The lab is provided with 65 computers, a projector, audio system and 24x7 internet facility to facilitate the enhancement of communicative abilities. The JNTUK English Curriculum develops the students' ability to communicate and also fosters a high liberal arts background. Such a background gives students not only marketable communication skills but also an understanding of the history and development of civilization.
